

JANOME BULLETIN

For models compatible with
Professional Grade Needle Plate (HP)

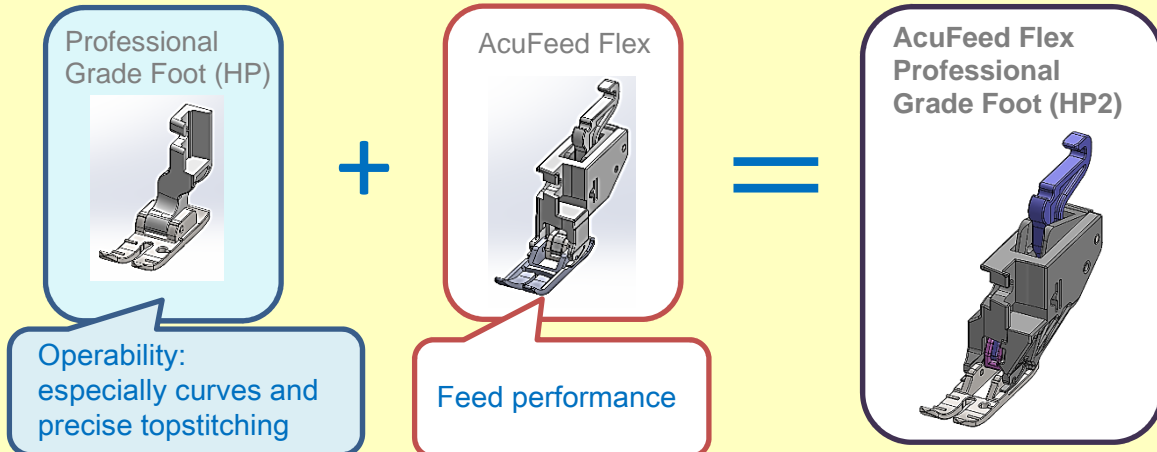

AcuFeed Flex Professional Grade Foot (HP2)

This foot provides superior visibility and is great for curves and precise topstitching. It holds fabrics firmly in sync with the feed dogs to achieve professional results.

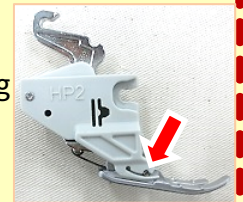

Part No.: 202-415-004

Point 1 Provides great operability and feed performance!

Operability: Great for 'curves and precise topstitching' due to the narrow foot width with superior visibility provided by the shape of the slit at the front of the foot.

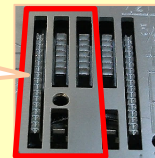

Feed performance: The shape of the bottom of the foot holder allows the foot to stay horizontal, helping to sew steps smoothly. Provides smooth feeding of top layer of fabric in sync with bottom layer for quilting and sewing leather and vinyl; prevents fabric puckering for knit and cupro.

Point 2 Left side feed dogs and Needle plate.

JANOME's Idea!

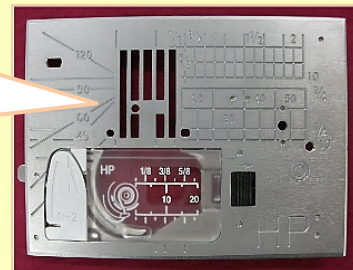

Utilizing the left side feed dogs make more stable sewing result!

AcuFeed Flex Professional Grade Foot (HP2) must used with Professional grade needle plate (HP).

The stitches available are automatically displayed when Professional grade needle plate (HP) is attached.

The needle hole of the needle plate is smaller, which prevents fabrics getting stuck.

Professional grade needle plate (HP)

Point 3 By matching the right side edge of the foot against the edge of the fabric, you can sew a 1/4" seam allowance!

Sized perfectly for creating 1/4" seams. This foot provides very stable sewing and good feed performance for piecing!

*When piecing, change the stitch length to 1.5-2.0.
