

# JANOME BULLETIN

Have you met our newest quilting accessories?

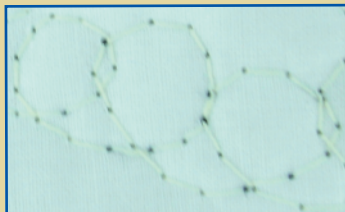

**Bobbin Holder for Free Quilting and Hand-Look Stitching for MC11000, MC6600P and MC6500P**

**Now Available!**

## Point 1

### Neater back stitches with free-motion quilting

With approximately 40% lower bobbin tension (compared to the MC6600P bobbin holder), this bobbin holder simplifies free-motion needle tension setting and improves the look of stitches on the back of your quilt.

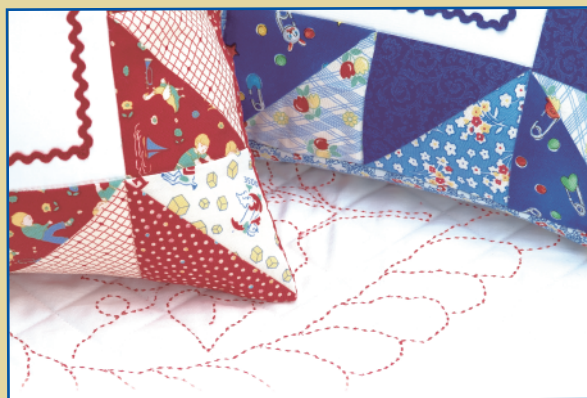

Part No.: 200445007  
(Blister package)

## Point 2

### Less thread breaks with hand-look quilt stitching

Bringing up the bobbin thread to create the hand-look stitches requires almost maximum thread tension with the standard bobbin holder, but with the low tension holder you can get the same amazing effect without having to raise the thread tension as high.

(Effect created using clear monofilament in the needle and #90 thread in the bobbin.)

## Point 3

### Easy differentiation

The blue marking on the top of the low tension unit allows for easy differentiation from the standard bobbin holder which has a red marking.

A must have item for quilters looking to maximize the features of their MC6500P, MC6600P and MC11000!
